PROFILE

Senior Data Engineer & BI Developer with 8+ years designing cloud-native data platforms and analytics solutions. Expert in Power BI, Azure (Synapse, Data Factory, Data Lake, Functions), Databricks, PySpark/SQL and ETL—building scalable BI architectures, implementing RLS and data governance, and delivering dashboards and pipelines that cut data inspection and reporting time by up to 40%, improve query performance by 40–50%, and boost data retrieval efficiency by 50%. Collaborative team member who partners with finance and business stakeholders to translate complex data into actionable insights.

PROFESSIONAL EXPERIENCE

Senior Azure Developer, Luxoft

Jan 2026 to Present

Krakow, Poland

- Designed and developed Azure-based data integration solutions to move data from Orchestrade into the Azure data layer using Azure Service Bus, RabbitMQ, Azure Functions, and Databricks.
- Built Python-based Azure Functions to ingest data from source systems, publish messages to Service Bus, and send operational feedback and status responses back to upstream systems.
- Implemented and maintained scalable messaging workflows using RabbitMQ and Azure Service Bus to ensure reliable, asynchronous, and fault-tolerant data processing.
- Developed and deployed Databricks pipelines and Databricks Asset Bundles to transform, validate, and load data into the Azure data platform efficiently.
- Collaborated with cross-functional teams to design cloud-native data architectures, troubleshoot integration issues, and improve performance, monitoring, and reliability across the end-to-end data flow.

Power BI Developer, Heineken Global Shared Services

Jun 2023 to Dec 2025

Kraków, Poland

- Developed Power BI dashboards while working in Agile cross-functional team, reducing data inspection time by 40% for users and the back-end team, also collaborating with finance and business stakeholders to enhance BI governance strategies, ensuring data integrity and business alignment
- Redesigned and optimized existing Power BI dashboards, improving aesthetics and usability by 30%, which significantly enhanced overall user experience
- Optimized DAX calculations and query performance to enhance Power BI report efficiency, while implementing Power BI Service access, gateway configurations, Row-Level Security (RLS) and advanced Power Query transformations in Power BI
- Enhanced interactivity and engagement of Power BI visuals by 25% using Python and Deneb language, while also

creating a Power Apps solution for data visualization with Power Automate flows, streamlining data management in SharePoint lists

- Increased efficiency in data retrieval by 50% through writing and optimizing SQL queries at Azure Synapse and Redshift levels, complemented by creating ETL pipelines with Azure Data Factory and Databricks notebooks with PySpark
- Led knowledge-sharing sessions on best practices for ETL design, Spark performance tuning, and cloud-based architecture, mentoring junior engineers and ensuring efficient data processing workflows

Data Analyst, International Committee of Red Cross

Apr 2022 to Mar 2023

Baku, Azerbaijan

- Conducted data analysis by identifying patterns and trends within large datasets of beneficiary information
- Developed comprehensive Excel spreadsheets that organized and visualized beneficiary data using pivot tables, resulting in a systematic approach for analyzing over 10,000 records and identifying key trends with clarity
- Built interactive dashboards and reports using Power BI to communicate complex data insights to non-technical stakeholders, which improved productivity by 30%
- Implemented 20+ SQL queries and Python libraries like Pandas and NumPy to extract, transform, and load data for analysis and perform statistical analysis and visualization

Data Engineer, Maire Tecnimont

Jan 2020 to Apr 2022

Baku, Azerbaijan

- Extracted, transformed, and loaded data into the database system, monitored daily, and analyzed received data for errors before uploading into the system
- Created visualizations and reports by tools such as Power BI, which reduced the time spent on reporting by 20%
- Designed and implemented a new database schema that reduced query time by 40%
- Optimized data retrieval process for team to streamline reporting and insights
- Led a team of 5 members, delegating tasks and ensuring timely project delivery
- Conducted regular report presentations to stakeholders and management, translating technical insights into actionable business decisions

Handover Engineer, Maire Tecnimont

Aug 2017 to Dec 2019

Sumqayit, Azerbaijan

- Ensured all quality control records for the work accumulated, indexes available to support a phased systematic acceptance and handover
- Delivered input to project management, project controls, and construction and to track the progress of handover packages and documentation
- Monitored the definition of technical assurance requirements (testing certification) and production of assurance deliverables by the Contractors

LANGUAGES

AZERBAIJANI, ENGLISH, RUSSIAN

EDUCATION

MSc in Data Science, WSB Univeristy

Dąbrowa Górnicza

B.Eng. of Chemical Engineering, Baku Higher Oil School

Baku

CERTIFICATION

DP-700: Microsoft Certified: Fabric Data Engineer Associate

PL-300: Microsoft Certified: Power BI Data Analyst Associate

AZ-900: Microsoft Certified: Azure Data Fundamentals

IBM Data Analyst Professional

PROJECTS

Real-Time Banking Data Pipeline Project

- Designed and implemented an end-to-end modern data pipeline simulating a real-world banking ecosystem (customers, accounts, transactions)
- Built CDC streaming architecture using PostgreSQL, Apache Kafka, and Debezium to capture and process real-time data changes
- Orchestrated data ingestion and transformation workflows with Apache Airflow and Snowflake Bronze Silver Gold layers)
- Developed DBT models for staging, fact/dimension tables, and SCD Type-2 snapshots, enabling analytics-ready datasets

- Automated CI/CD workflows via GitHub Actions for dbt testing, linting, and deployment
- Containerized the entire stack with Docker and Docker Compose, ensuring reproducible and scalable infrastructure.

Databricks & DBT Project with CI/CD

- Designed and implemented end-to-end DBT pipelines on Databricks, building modular models for staging, marts, and transformations
- Managed DBT seeds and snapshots to handle reference data and capture historical changes for auditing and SCD tracking
- Authored and maintained YAML and JSON configurations for models, sources, and job orchestration, ensuring consistent deployments
- Developed and executed DBT tests (unique, not_null, relationships, custom) to enforce high data quality standards
- Automated deployment workflows using PowerShell scripts, CI/CD pipelines, and Git version control, enabling seamless environment promotion (dev to production)
- Documented models, lineage, and macros within DBT to improve transparency, maintainability, and team collaboration.

Azure End-to-End Data Engineering Project (Master's Thesis)

Krakow, Poland

- Designed and implemented a cloud-based data engineering pipeline using Azure services for processing large datasets
- Developed ETL/ELT pipelines using Medallion Architecture (Bronze, Silver, Gold layers) to ensure scalable, structured data processing
- Optimized Apache Spark batch and streaming jobs, improving query performance and reducing processing time
- Implemented Delta Lake for efficient storage and ensured data governance and security compliance
- Automated data ingestion and transformation using Azure Data Factory and Databricks Notebooks.
